M.Sc. Pathogenic
Organisms

zhe.xie@tum.de

Brief info:

Doctoral Program:

Medical Life Science and
Technology

Institute:

Institute of Virology

Working Group:

AG Protzer

Research topic:

HBV specific CAR-T cells

Application for:

- Program of Medical Life
Science and Technology

Motivation for candidacy

My motivation to improve the situation for doctoral candidates of MLST PhD program, encourages me to apply for a second term in office. Finishing my first year as a MLST PhD representative, I gained a profound insight into our program, also get familiar with the duty as a student representative. I would take advantage of my past experience to serve every student in MGC.

Our laboratory has plenty of international students from over ten countries, it is convenient for me to get all the ideas from different aspects. I will definitely take the suggestions and advice from the students in other lab as well.

From a personal point of view, student representative is a perfect way to promote myself. Running for the election is also a good opportunity to exercise myself.

Goal

- Be a good link between MGC and candidates, help improve the program
- Expansion of doctoral support
- Represent international students wishes

Experience

I had a 3-year experience in student Union in my bachelor and was a member of the party branch committee in master. Last year's work also allowed me to accumulate a lot of experience. I would take advantage of my past experience to serve every student in MGC.
